

Provide Your Users Secure Internet Single Sign-on to and from SharePoint in Hours

“Ping Identity continues to be a leader in getting product into the marketplace and building an identity metasystem.”

Kim Cameron
Microsoft

With enterprise-wide spending on Microsoft SharePoint exceeding \$480 million in 2007*¹, it's no wonder organizations are looking to capitalize on their SharePoint investments. Whether you have ten or ten thousand SharePoint sites that you want to extend to external partners and suppliers or use SharePoint Portal to link your internal users to external resources over the Internet, providing direct access is key to adoption. Organizations are turning to secure Internet single sign-on (SSO) to improve SharePoint's ease of use for users, partners and suppliers, eliminate overhead commonly associated with managing external users, and enhance security of Internet-based collaboration.

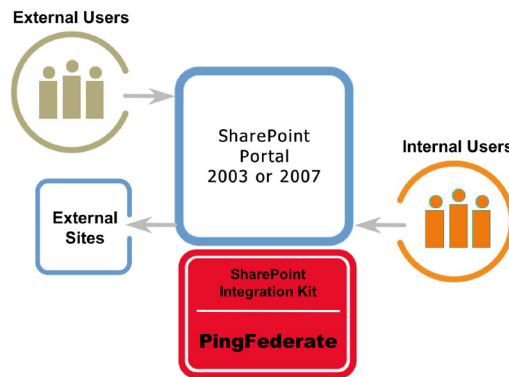

With PingFederate's Microsoft SharePoint SSO solution, organizations can provide secure Internet SSO for external suppliers and partners to directly access internal SharePoint sites and for internal users to directly access linked sites from SharePoint

Secure Internet Single Sign-On for Microsoft SharePoint

With PingFederate's® Microsoft SharePoint single sign-on (SSO) solution, organizations can easily provide internal users of SharePoint Portal SSO to linked external resources over the Internet, and external partners and suppliers SSO to SharePoint sites with secure Internet single sign-on. Secure Internet SSO utilizes standards-based methods, such as SAML and WS-Federation, to provide internal and external users safe access to SharePoint Portal Server 2003 and 2007 and other applications over the Internet, without the need to re-login. The SharePoint solution can be rapidly installed and configured in hours, giving all users of SharePoint immediate SSO capabilities.

Improve SharePoint User Adoption by up to 80%

PingFederate SharePoint solution allow both internal and external users direct access to SharePoint sites and linked sites from SharePoint Portals, without the need to re-login. Users no longer have to remember additional usernames and passwords simply to access SharePoint; unbeknownst to the user, they are automatically authenticated by either their own security domain or yours. By eliminating prohibitive steps to gain access to SharePoint, organizations can increase user adoption by up to 80%.

With PingFederate's SharePoint solution, organizations can provide secure Internet SSO for external suppliers and partners to directly access internal SharePoint sites and for internal users to directly access linked sites from SharePoint

Reduce SharePoint Password Resets by up to 70%

When providing external access to SharePoint and direct access to linked Internet resources from SharePoint, many operational managers want to avoid the operational overhead commonly associated with maintaining additional users. By providing SSO to SharePoint, users are automatically authenticated by Microsoft Active Directory on the SharePoint domain; the need to reset passwords is considerably reduced since the user does not have to remember or enter in their password to authenticate.

Decrease Security Risks Associated with SharePoint

SharePoint's collaboration capabilities are ideal, but providing access for external users to internal sites can be a security headache. SSO has to be secure to protect the users, the enterprise, partners and suppliers. The SharePoint SSO solution helps organizations extend their security policy umbrella to SharePoint by eliminating the need to email passwords over the Internet for password reset requests and reducing phishing opportunities by removing login pages.

Provide Secure Internet Single-Sign-On for All Connections

PingFederate not only provides direct access to SharePoint, it also delivers secure Internet SSO to other applications hosted by business process outsourcers and partners. By supporting SAML and WS-Federation federated identity security standards, you can easily deliver secure Internet SSO for all of your external partners from a single system, regardless of their security requirements or identity infrastructure.

Provide SharePoint SSO Today

To get started, download the SharePoint software solution at www.pingidentity.com/products/downloads.cfm. You can easily have SSO to and from SharePoint in hours.

About PingFederate

PingFederate is the world's first rapidly deployable software that enables secure Internet single sign-on by providing an organization's users safe access to Internet applications without the need to re-login. Identity federation deployments that used to take six months or more now take weeks with PingFederate's easy-to-use comprehensive software. Over a dozen PingFederate integration kits easily enable first-mile integration, leveraging existing identity management infrastructure, and last-mile integration, providing scalable target application connections.

About Ping Identity Corporation

Ping Identity's dedication to delivering secure Internet single sign-on software and services for over 150 customers worldwide has earned us recognition as the market leader in federated identity management. With PingFederate and PingEnable — Ping Identity's expert support, services, and methodologies — external connections can be operational in less than a week.
